

PATIENT INFORMATION

Head and Neck Cancer Speech and Language Therapy Service

The Head and Neck Cancer Speech and Language Therapy service at Torbay Hospital offer advice and support for patients who are having/ have had treatments for head and neck cancer. This can include lips, tongue, cheek, jaw, salivary glands, tonsils, soft palate, throat and the neck. Treatments can be surgical or oncological (chemotherapy/ chemoradiotherapy / radiotherapy).

Cancer to the head and neck causes short and long-term side effects that can affect a person's ability to speak clearly, produce voice and swallow normally. SLTs are an integral part of a multi-disciplinary team (MDT) working with patients with head and neck cancer. We provide support to patients prior to treatment; whilst having their treatment, and for any long-term speech, swallowing or voice needs, including those patients who become palliative.

SLTs have expertise in assessment and rehabilitation of communication and/ or swallowing difficulties, laryngectomy rehabilitation, tracheostomy management, palliative care and research. We provide specialist instrumental swallow assessment including videofluoroscopy (an X-ray of swallowing) and fiberoptic endoscopic evaluation of swallowing (FEES).

Head and neck cancer patients who are under the care of a consultant at Torbay hospital are welcome to refer themselves to this service.
