FALLS CARE PLAN

To reduce likelihood of falls in care homes whilst maintaining dignity and independence

Name:			ID No:					
Staff name:			Date of Birth: Staff initials					
Staff name: Staff name:			Staff initials					
		- hal				falla sava sal	<u> </u>	
If Yes to any of the 6 que	-	is bei		•	•	•		
1. History of falls before or sin	nce		2.	waiking un	steadily/unsa	are to walk a	aione?	
admission?			4.	Docidont or	, volotivo opvi	ous shout f	alla	
3. Resident taking tablets to calm			4. Resident or relative anxious about falls					
them or help them sleep?			6. Resident incontinent/ needing toilet					
Resident confused/ disorientated?								
disorientateu:				frequently?				
Falls history	Detai	ls:						
What were they doing just before the								
fall? Where did the fall occur?								
Do they reliably call for assistance when								
needed? If fall witnessed document account								
Recommendations	Δcti	on Ta	ken incli	ude review	Initials	Date	Review	/ date
Recommendations	actio		KCII IIICI	ade l'eview	Inicials	Date		
Unfamiliar Environment:								
Introduce to environment, particularly								
toilets and washing facilities. For some								
residents this could be daily requirement								
Place:								
Accommodate resident where they will								
most easily be observed								
Regular monitoring:								
At hand over consider need for this and								
at which intervals it is most appropriate								
 this may change on daily basis. Use appropriate form to record monitoring 								
Eyesight and Hearing:								
Ensure glasses and hearing aids are								
clean, worn and/or within easy reach.								
Refer on if appropriate								
Bed/Chair:								
If likely to fall out of bed, ensure the bed								
is at its lowest possible height unless this								
will reduce mobility or independence,								
check mattress. Refer to zone team if								
issues remain. Consider the need for a chair of appropriate height and design								
Medication:								
Medication should be reviewed 6								
monthly for those over 75 and on 4+								
meds. Yearly for under 75s								
Handover:								
Ensure staff are informed of resident's								
falls risk at each handover and any								
recent changes in circumstance – think –								
ReStore 2								
Mobility:								
Ensure walking aids are appropriate and								
kept within reach. Refer on to physio if								
concerned	ĺ				I	I	l l	

Footwear:		
Ensure resident has and is wearing		
appropriate footwear where applicable:		
secure fit, non-slip, no trailing laces.		
Consider non-slip slipper socks for those		
at risk of falling at night		
Lighting:		
Check resident's ability to operate lights		
and sufficient brightness to allow safe		
mobilising		
Confusion/disorientation:		
Refer any deficit/increased confusion to		
GP. Increase supervision. Offer		
appropriate productive occupations e.g.		
activity groups.		
Be aware acute confusion may indicate		
infection. Check resident's temperature		
and send sample to GP or refer		
Toilet:		
If falls associated with resident's		
toileting, a routine of toilet visits may be		
helpful		
Lying and Standing Blood		
Pressure:		
Refer any dizziness symptoms to GP		
Advise resident to change position slowly		
Behaviours:		
Does this person exhibit challenging		
behaviours that staff struggle to cope		
with? What helps?		
Do they get agitated? If so when and		
what helps to calm them		
Is a referral to the Care Home Education		
Support (CHES) team required?		
Inform:		
Provide Age UK's' Staying Steady' leaflet		
to resident/relative/carer and engage		
them in this care plan. Check contact		
wishes in the event of a fall and		
complete incident form		

Please use in conjunction with ReStore 2

Reassess monthly, after any fall or any change in circumstances use new sheet if required
